

Преобразователь импеданса EZ-12

for interference measurements on vehicle antennas to CISPR25

- Frequency range
150 kHz to 30 MHz (120 MHz)
- Flat frequency response
- High sensitivity
- High overload capacity
- Calibration to future CISPR25
- Remote-controlled FM range switch

Antenna Impedance Converter EZ-12 is a wideband matching unit with high-impedance input for test receivers and spectrum analyzers with low-impedance inputs. It is used for measuring interference voltages in the long-, medium- and shortwave bands at the output of vehicle-mounted antennas. The flat

frequency response plus the high sensitivity and overload capacity guarantee reliable results. A remote-controlled switch allows automatic switchover for interference voltage measurements in the FM range at the same antenna.

For unimpaired signal reception, in a car for instance, the interference voltage coming from various sources in the vehicle must not exceed specified values at the output of the antenna cable. Measures taken at the vehicle to ensure this are referred to as RFI suppression with respect to onboard reception. The measurement of RFI voltages at the antenna is a complete vehicle test in contrast to RFI voltage and field-strength measurements on electric and electronic vehicle components. Limits for interference levels at the vehicle antenna are specified by the CISPR25 standard.

With a nominal gain of +10 dB (transducer factor –10 dB) and an input impedance of >100 kΩ//10 pF, EZ-12 permits the open-circuit voltage at the output of the vehicle antenna cable to be measured with a test receiver or spectrum analyzer. EZ-12 is factory-calibrated with the aid of a dummy antenna in line with the future CISPR25 standard. During calibration the expected theoretical voltage is measured at the output of the antenna cable. The antenna cable is connected to the input of EZ-12, the test receiver or spectrum analyzer to the output. EZ-12 is powered from R&S test receivers or spectrum analyzers. When test receivers and spectrum analyzers of other make are used, Power Supply HZ-9 for active antennas or another 10 V supply serves as the power source.

Specifications

Frequency range	150 kHz to 30 MHz (120 MHz)
RF input	standard connector to ISO 10599 part 1:1.92 [DIN/ISO 10599 part 1:10.93] or BNC female (by resoldering internally)
Input impedance	>100 kΩ//10 pF (at 1 MHz, meets CISPR 25)
Transmission factor for direct input to antenna socket	+11.2 dB ±1 dB (f: 100 kHz to 30 MHz)
Nominal gain to future CISPR25	+10 dB (f: 100 kHz to 30 MHz)
For input via antenna simulator to future CISPR25	-9.15 dB ±0.5 dB (f: 100 kHz to 30 MHz)

1 dB compression point at input	>107 dBµV (typ. 110 dBµV)
Noise voltage at AM output with antenna simulating network connected, referred to input	<-5 dBµV (typ. -8 dBµV) (f: 150 kHz to 500 kHz) <-7 dBµV (typ. -10 dBµV) (f: 0.5 MHz to 30 MHz, measured with AV detector, BW = 10 kHz)
RF outputs AM, FM AM output: SWR	BNC female, 50 Ω ≤1.4 (f: 150 kHz to 30 MHz; meets CISPR25)
FM output: SWR at input (output terminated with 50 Ω) Insertion loss input/output	≤1.4 (f: ≤120 MHz) ≤0.5 dB (f: ≤120 MHz)
Power supply Supply voltage Current drain	12-contact Tuchel-type, female +10 V ±0.1 V <50 mA
Remote-control connector for AM/FM switchover	9-contact Cannon-type, female
General data	
Rated temperature range	+5 °C to +55 °C
Storage temperature range	-25 °C to +70 °C
Dimensions (W x H x D)	125 mm x 110 mm x 40 mm
Weight	0.6 kg

Ordering information

Order designation		
Antenna Impedance Converter	EZ-12	1026.4800.03
Accessories supplied		
Power Cable (3 m)	HZ-3	0837.3469.02
Recommended extras		
required only if EZ-12 is not powered from R&S receivers		
Power Supply for active antennas	HZ-9	0816.1045.02
For remote control by R&S receivers of series ESxS: Control Cable (5 m)	EZ-14	1026.5341.05
For remote control by R&S receivers ESxI and ESI: Control Cable (5 m)	EZ-4	0816.0560.05
Long Power Cable (10 m)	HZ-4	0816.0519.02
